(54) Title: PROCEDURE AND DEVICE FOR CONTROL OF DATA FILE TRANSMISSION

## (57) Abstract

A procedure for control of data file transmission between transmitting (30-33) and receiving units (20), at which examples of the data file (F) that shall be transmitted/transferred are stored at a plurality of transmitting units (30-33), and a device to effect this procedure. The control of the data file transmission is performed according to the following: Transmission of segments (S1-S4) of the wanted data file (F) from a plurality of transmitting units (30-33) is requested and these segments (S1-S4) are received from these transmitting units (30-33). When the transmission of a segment (S1-S4) of the data file (F) from a first server (31) is finished, transmission of one more segment (S1) of the data file (F) is requested, for which transmission from another server (30) has started but not been finished, from the first server (31). This is after that repeated until all segments (S1-S4) have been transmitted, at which transmissions is progress are stopped and the segments (S1-S4) are put together to the wanted file (F).
